A WEBLYTICA GUIDE · INSPIRED BY NVIDIA CEO JENSEN HUANG

Use AI Like a Billionaire CEO

10 habits you can copy this week. **No secret tools required.**

WHY THIS GUIDE EXISTS

When NVIDIA CEO Jensen Huang sat down with journalist Cleo Abram on her YouTube show *Huge Conversations* in early 2025, he gave one piece of advice he said nearly everyone should follow:

> **"Go get yourself an AI tutor right away."**
>
> Jensen Huang, CEO of NVIDIA, on *Huge Conversations* with Cleo Abram

He told her he keeps an AI tutor with him all the time and uses it to learn new fields. Then, at NVIDIA's GTC keynote in March 2026, he said that 100% of NVIDIA uses a combination of Claude Code, Codex, and Cursor.

Here's the part most people miss. Huang runs one of the most valuable companies on the planet, and the tools he uses are the same ones you can open on your laptop today. The difference isn't access. It's habits.

This guide breaks those habits into 10 simple moves. You don't need to do all ten. Pick one, try it by Friday, and see what changes.

1

TALK, DON'T TYPE

Your voice is your fastest keyboard

Researchers from Stanford, the University of Washington, and Baidu found that speaking into a phone was about 3x faster than typing on its keyboard, with fewer errors.

AI rewards detail. The more context you give it, the better the answer. Talking lets you give that context without the friction of typing it out.

Ruan et al., "Speech Is 3x Faster than Typing for English and Mandarin Text Entry on Mobile Devices"

TRY THIS WEEK

- **Windows:** press Win + H to start dictation
- **Mac:** turn on built-in Dictation in System Settings
- Ramble your full situation into the AI. Don't edit yourself. Let it sort it out.

2

AN AI ASSISTANT IN EVERY MEETING

Let AI take notes. You run the meeting.

Big-company CEOs don't take their own notes. AI meeting assistants now record, transcribe, pull out action items, and push them into tools like Asana, monday.com, or Notion.

~$295/day
Median U.S. executive assistant pay ($76,590/yr, BLS, May 2025), before benefits

A fraction
Typical AI note taker subscription (check current pricing)

TRY THIS WEEK

- Turn on the AI notes feature in Zoom, Teams, or Google Meet, or try a dedicated note taker
- After the meeting, ask: *"List every action item, who owns it, and when it's due."*
- Spend the meeting listening and leading, not scribbling

SHOW, DON'T TELL

3 Stop sending walls of text

Nobody reads the 40-page report. Executives want one screen that shows what's working and the one thing that isn't.

AI can turn a long report, a spreadsheet, or a messy update into a simple dashboard or one-page visual summary in minutes.

TRY THIS WEEK

- Paste your last long report into AI and ask: *"Turn this into a one-screen summary. Show the three numbers that matter and flag the one thing that needs attention."*
- Ask it to build a simple chart or dashboard from the data instead of a paragraph

HAVE AI INTERVIEW YOU

4 Don't write the prompt. Answer the questions.

Most people stare at a blank AI box and try to write the perfect prompt. Flip it. Let the AI ask you the questions.

AI: What's the goal of the referral program?
You: More repeat clients, without discounting.

AI: Who sends you referrals today, and why?
You: Mostly past clients I stayed in touch with.

AI: What would a win look like in 90 days?

PASTE THIS

> *"I want to [goal]. Before you write anything, interview me. One question at a time. Stop when you have enough. Then summarize."*

By the end, the AI understands your business better than a prompt ever could have explained it.

ASK FOR FLAWS, NOT OPINIONS

5 AI wants you to like it. Make it argue.

AI models have a known habit of agreeing with you. In a 2023 study, Anthropic researchers found that Claude 1.3 wrongly admitted to mistakes on 98% of questions when a user pushed back on a correct answer. Newer models have improved, but the tendency hasn't disappeared.

So stop asking for its opinion. Ask it to find problems.

Sharma et al., "Towards Understanding Sycophancy in Language Models," Anthropic, 2023

TRY THIS WEEK

Don't ask: "What do you think of my plan?"

Ask instead:

- "What are the 5 biggest flaws in this plan?"
- "Roast this like a skeptical customer."
- "That's too agreeable. Give me a sharper take."

QUESTION YOUR OWN NUMBERS

6 AI has answers. You bring the questions.

You probably have months of data sitting in spreadsheets: ad spend, sales, leads, invoices. You don't need to be a data analyst. You need to ask good questions.

Always double-check the math on anything you're going to act on. AI is fast, but it can still make mistakes with numbers.

TRY THIS WEEK

Upload 12 months of ad spend or sales data and ask:

- What does a customer cost me?
- Is that cost going up?
- Where does my funnel leak?
- Did the agency actually move the needle?

7

GET YOURSELF AN AI TUTOR

Learn anything. 10 minutes a day.

> **"Go get yourself an AI tutor right away."**
>
> Jensen Huang, CEO of NVIDIA, on *Huge Conversations* with Cleo Abram

This is the habit Jensen Huang pushes hardest. He's said AI can teach you almost anything you want to learn, and that the barriers to understanding a new field have dropped.

TRY THIS WEEK

Monday	10 min
Tuesday	10 min
Wednesday	10 min
Thursday	10 min
Friday	Quiz day

- Set up a scheduled daily lesson in ChatGPT, or ask Claude to build you a simple flashcard app
- Pick one topic you've been avoiding and start Monday

8

NEVER MISS A MARKET BEAT

Your Monday morning analyst team

Big companies have analysts who brief the CEO every week. You can have a version of that too.

Set up a recurring AI task that pulls together industry news, competitor offers, price changes, analyst reports, and podcasts in your space.

TRY THIS WEEK

Schedule a short **Monday 7:00 a.m. brief** that covers:

- Industry news and competitor offers
- Price changes and analyst reports
- Podcasts in your space
- Ending with **one action to consider this week**

9

WHEN IN DOUBT, ASK IT TO TRY

Don't guess. Test it.

When Jensen Huang says 100% of NVIDIA uses AI coding tools, that's a company that tests what AI can do instead of assuming it can't.

AI tools change fast. Something that didn't work when you tried it in 2023 may work fine today. If you're wondering "can AI do this?", don't debate it. Just ask it to try.

Jensen Huang, GTC keynote, March 2026

TRY THIS WEEK

- Pick one task you assumed AI couldn't handle and ask it to try
- If it fails, ask it what it would need to succeed

10

MAKE AI A UTILITY

Not a side project. A utility.

> **"At Quantious, AI isn't a department. It's a utility, like Wi-Fi or electricity."**
>
> Lisa Larson-Kelley, CEO of Quantious, *Fast Company*, November 2025

The companies getting real value from AI don't treat it as an experiment one person runs. They make it available to everyone, like the Wi-Fi.

TRY THIS WEEK

A simple 30-day rollout:

1. Each person picks **one** repeat task
2. They use AI on it for **30 days**
3. Everyone **shares what works**

YOUR MOVE

Pick one. Try it this week.

Don't try all ten. Try one by Friday.

1 Talk, don't type	2 AI takes the notes	3 Show, don't tell	4 Get interviewed	5 Ask for flaws
6 Question your numbers	7 Daily AI tutor	8 Monday brief	9 Just test it	10 AI as a utility

You have the same tools as the billionaires. Now you know the habits.

LET'S TALK ABOUT YOUR COMPANY'S AI NEEDS

Knowing the habits is step one. Building them in is step two.

Building AI into how your business actually runs is where most companies get stuck.

That's what I do. I've spent more than 1,100 hours building automations live alongside business owners, so the systems fit the way your team already works instead of forcing a new way of working on them.

Your first call is free: 45 minutes to look at your business and see where AI can save you the most time.
